QBIX - Quality booster for QoE and context-aware adaptive service

GOALS

- testing innovative QoE Video Controller features with different network technologies (WiMAX, LTE),
- verifying reliability and tune the Video Controller **logic to improve QoE**
- evaluating the congestion control rules for selected use-cases (i.e. MedStar eHealth application)

CHALLENGES

- Hard to get access to Base Station parameters and network statistics in normal tests
- Switching between different technologies would require lot of work and investments (at start our video controller were developed with WiMAX in mind)
- In testbed, there was perceptible lack of mobility testing

DEMO SETUP

Tabl

...after QBIX

Metrics used were developed by AGH University [1] and are available to download from http://vq.kt.agh.edu.pl/metrics.html

CONCLUSIONS

Thanks to experiments we conducted within testbed we:

- were able to gain insights and acknowledge the role of Fed4FIRE testbeds in development and/or improvement of our products and services
- verified that Fed4FIRE can be valuable for remote collaboration opportunities of our testers and developers (it worked as single stop shop for the development, tuning and reconfiguration of the solution, available 24/7)
- able to gather valuable insights for further tuning the QBIX controller
- have identified new means for performing scalability tests without hassle of necessary HW configurations and time consuming tests (time & cost savings)
- verified the influence of network configuration (e.g. BS parameters / statistics) on the QBIX controller performance – not possible without access to dedicated testbed
- were able to identify some performance flaws of our solution and its sources
- were able to check possibilities of integrating QBIX with LTE networks
- were able to test behavior of our solution with high end equipment

POST MORTEM

- Experiment allowed for a development of several extensions for MediStream – ITTIs telecare product
- Possible further extensions for video controller to better suit other profitable markets (security or autonomous cars)
- Testbeds provides great asset for any SME interested into comprehensive testing and evolvements of their tools and services
